

Construction Chemicals

Turbo WP+ - Waterproofing Plus

Stronger Mix, Stronger Walls.

Turbo WP+ is a chloride-free liquid additive that makes cement mixes denser, cohesive, and resistant to seepage. Blended into concrete, mortar, or plaster, it works from within to block pores and capillaries, preventing seepage and dampness. By reducing porosity and shrinkage, it controls cracking and strengthens surfaces. By lowering water absorption, it protects embedded steel from rust and corrosion, adding years of life to your construction.

From roofs and bathrooms to basements and foundations, Turbo WP+ ensures walls and structures remain dry, strong, and dependable even in demanding conditions.

Key Features & Benefits

Waterproofing

Acts inside the mix to block seepage.

Improves Workability

Easier mixing and application.

Minimises Cracking

Reduces shrinkage stress.

Improved Strength

Enhances the tensile and flexural strength of cement mixes, giving more durable repairs.

Steel Protection

Guards against rust and corrosion for longer durability.

Clean, Durable Finish

Minimizes dusting and surface chalking, leaving repairs neat.

Versatile Use

Suitable for all cement mixes in construction.
